

ENVIRONMENT AND COMMUNITY

Healthier Soils

As a byproduct of the anaerobic digestion process, our facilities produce an organic, odorless soil amendment – similar to compost – that can be applied to public lands and community gardens to replenish nutrients.

Healthier Air

Our facilities help to minimize carbon-intensive disposal practices like incineration, landfills and land applications that release polluting greenhouse gases into the atmosphere – improving the air that we breathe.

Healthier Water

BDC's fully enclosed anaerobic digesters eliminate groundwater pollution often caused by excessive land application of nutrients and landfill operations, minimizing excessive nutrient runoff that can poison ecosystems and cause significant human health issues.

COMMUNITY BENEFITS

On behalf of the Spade and Trowel Garden Club of Seaford we want to thank you for the compost which you provided so that we could plant the pots on the bridges and in front of city hall and several downtown businesses. Thank you so very much.

We welcome the opportunity to build relationships with our local communities that addresses issues around jobs, keep an open dialogue to enhance sustainability, guaranteeing the value of anaerobic digestion can be felt by everyone living near our facilities.

By embracing solutions that simultaneously serve environmental and local economic interests, our team is dedicated to creating new green skilled jobs, addressing the challenges of organics management and environmental justice issues – all while providing a local renewable energy solution for our region.
